## About

I have a passion for the user experience. I believe that the user comes first in every aspect of a product including design, performance, and accessibility.

I have a BS in Web Development and Programming from Belmont University. I have been doing web development for about 2 years now. My creative background started in music and brought me to design and web due to the frequent need for t-shirt designs and websites for my band.

I love technology, travel, music/shows, and craft beer. I'm a hipster.

## Skills

## Experience

# THE DETAILS

## Summary

I am earning my BS in Web Development and Programming from Belmont University in May 2015. I developed my programming skills through coursework that focused on OOP with Java, as well as some PHP and Javascript coursework. I also am constantly using online resources to continue developing my skills in HTML, CSS, Javascript, and even dabble with iOS development and Swift. I am comfortable using Adobe CS: most specifically Photoshop and Illustrator, but I am liking what I'm seeing/hearing about Sketch for UI design. I just haven't had a chance to really explore it yet.

This past year I have had the opportunity of interning as a Front-end/UX developer at HCA IT&S. Since starting my internship I have become much more accustomed to Git/version control and the Yeoman workflow using Bower, Jekyll, and Grunt. Bootstrap and LESS are frequently used tools in our development at HCA. I love learning and being challenged by new and/or unfamiliar technologies.
